PROFESSIONAL SUMMARY

Junior Java Developer and Information Systems student with hands-on experience developing and maintaining corporate applications using Java, Spring Boot, Spring MVC and Spring Data. Experienced in the full software development lifecycle, from requirements analysis to implementation and support, building and consuming REST APIs and working with relational databases (PostgreSQL) in a microservices architecture. Comfortable in agile teams (Scrum/Kanban), with practical use of Git, code review and automated testing (JUnit, Mockito) to ensure code quality, performance and security. Also bring international remote work experience and applied AI knowledge as a differential.

PROFESSIONAL EXPERIENCE

Midas Systems Development June 2025 — June 2026
Software Engineer (Full-Stack)

- Developed and maintained corporate applications end-to-end using Java and Spring Boot, from requirements analysis with business stakeholders to implementation and support.
- Designed, built and consumed RESTful APIs and relational data models with Spring Boot and Spring Data for a legal web platform.
- Wrote automated tests with JUnit and Mockito and took part in code reviews, reducing bugs by 30% and reinforcing development best practices.
- Developed an intelligent chatbot using Spring Boot and Flutter/Dart, improving user interaction by 20%.
- Integrated an LLM for document processing via OCR, increasing accuracy by 15%.
- Collaborated in a small, autonomous agile team (Kanban), improving code quality and operational efficiency.

FlyRank AI — Chicago, IL (Remote) June 2026 — September 2026
Backend AI Engineer

- Contributed to the development and maintenance of backend systems and REST APIs powering AI-driven content automation for organic search growth.
- Used Docker, including multi-stage builds, to containerize and deploy backend services in a remote, distributed, English-speaking team.

FIRA RoboWorld Cup 2024 January 2024 — December 2024
English Interpreter

- Worked as an interpreter in an international robotics competition, facilitating technical communication in high-pressure situations.
- Provided simultaneous translation at events, contributing to the team's success in a multicultural environment.

ACADEMIC BACKGROUND

Federal Institute of Maranhão (IFMA) March 2024 — March 2028
Bachelor's degree in Information Systems

SKILLS

Back-End: Java, Spring Boot, Spring MVC, Spring Data, Spring Security, REST APIs, Microservices, System Architecture, Design Patterns, JWT, Redis, PostgreSQL, SQL, Relational Databases.
Tools and Methodologies: JUnit, Mockito, Gradle, SOLID, Clean Code, Git, GitHub, Code Review, Agile (Scrum/Kanban), Swagger, Unit and Integration Testing, Bash Scripting.
Cloud & DevOps: Docker (multi-stage builds), Docker Compose, Kubernetes, CI/CD, Microsoft Azure, AWS, Linux.
Other: Python, FastAPI, LLM Integration, OCR, Prompt Engineering, React, Angular, TypeScript, Flutter, Dart.

LANGUAGES

Portuguese — Native

PROJECTS

DistroWiki — *Developer*

An open-source web platform to aid in choosing Linux distributions, allowing for side-by-side comparisons with standardized performance metrics. Built with React, TypeScript, Tailwind CSS, and Vite, with dynamic daily scraping and continuous deployment via Vercel.

SIGAMA Vision — *Developer*

Prototype of a web platform for agricultural management developed for the AGED/FAPEMA 2025 grant, featuring a document analysis workflow (GTAs), compliance score generation, and fraud detection. Built using React 18, TypeScript, and Tailwind CSS.

LLMX — *Developer*

Personal assistant for Linux environments via terminal, allowing you to execute commands, search for files, and generate scripts using natural language with support for multiple LLM providers. Built with TypeScript, Node.js, and React Ink.

CERTIFICATIONS

- Java Fundamentals Formation (DIO)
- Object-Oriented Programming with Java (DIO)
- Fundamentals of Java Language Syntax (DIO)
- Introduction to Spring Framework with Spring Boot (DIO)
- Spring Ecosystem for API Development (DIO)
- Creating your First REST API with Spring Boot (DIO)
- Connecting your API to a Database using Spring Data (DIO)
- Adding Security to a REST API with Spring Security (DIO)
- Creating a Documented REST API with Spring Web and Swagger (DIO)
- Introduction to Relational Databases (DIO)
- Unit Testing in Java with JUnit (DIO)
- Design Patterns with Java: From the Classics (GoF) to Spring Framework (DIO)
- SOLID and Clean Code in Java: Writing High-Quality Code (DIO)
- Working with Design Patterns in Java Applications (DIO)
- Git and GitHub: First Steps and Environment Setup (DIO)
